I have an ASUS GeForce GT 640 with the latest proprietary drivers installed. I enabled Crossfire, and got this error: The system returned: (1) nVidia crossfire supp-module could not be loaded To fix this, you will need to remove the Crossfire Drivers or disable Xfire in the BIOS. I tried disabling Xfire, and it started to load, but then failed. It said that it was "waiting for monitor...", and then "failed to communicate with Display", I think it said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It said that it was waiting for 60 seconds, but then it just started to load, but failed. It 82157476af
